

# Index

**Note:** page entries followed by an “*f*” and “*t*” indicate that the reference is to a figure or a table respectively.

- Acid-blocking medications, 20–21, 39
- Addictions
  - to caffeine, 40–41
  - Dopamine and, 33–34
  - to drugs and food, 34, 58
  - symptoms of, 33
- Adenosine triphosphate (ATP), xiv, 12, 27
- Allopathic, xii, xiv
- Alzheimer’s disease, 27–28, 51
- Ames, Bruce, 24, 53
- Amino acids
  - and blood sugar, 61
  - and bone health, 37, 39
  - for energy production, 30*t*
  - and exercise stamina, 48–49
  - low, symptoms of, 3–4, 4*t*
  - phenylalanine in, 9–10
- Analytes, table of (by condition), 81–92
- Antibiotics, xii, 17, 31, 74
- Antibody-antigen complexes, 22
- Antidepressants, xii, xiii, 31, 41, 74
- Asthma, 1
  - low amino acids and, 4
  - nutritional biochemical testing for, 71–72*f*
- Asymmetric dimethyl arginine (ADMA), 60
- Biochemical dysfunction, xi–xiii, 74
  - in exercise stamina, 48
  - need for diagnosing, 80
- Biochemical pathways, xiv
  - deficiencies in, 18
  - extreme sports and, 47
  - influence on mood and energy, 41
  - testing for abnormalities in, 34
  - treating sexual dysfunction and, 60
- Biochemical testing, xiii, 26, 44, 48
  - for Age-Related Degeneration (ARD), 77–78*f*
  - for seizure, 73*f*
  - for total body breakdown, 74–76*f*

- Blood sugar, 4, 35, 84
  - causing insomnia, 64–65
  - hypoglycemia and, 42–43, 52, 61
  - regulating, 61–62, 65–66
- Bone health, 37–40
- Botanical medicine, xi
- Breast cancer
  - biochemical parameters for, 69
  - diet and, 68
  - genetics and, 68
- Calcium, 89, 91
  - bone health and, 37–39
  - osteoporosis and, 36, 39
  - in refining flour, 18–19
- Cancer, 8, 25, 28, 32, 60
  - biochemical parameters for, 69–70
  - breast cancer, 68–69
  - causes of, 67–68*t*
  - diet and, 16–17
  - exercise and, 47
  - genetic factors, 68
  - magnesium deficiency and, 12
  - overweight and, 56–57
  - prostate cancer, 68–69
- Cardiovascular disease
  - diet and, 16
  - flavonoids and, 14
  - overweight and, 56
  - processed foods and, 18
- Celiac disease, 22, 82
- Chronic stress, effect of, 53
- Classification systems for diagnosis, 80–92
- Conventional medicine, xi–xiii, 71
  - for depression, 41
- Copper
  - bone health and, 37, 39
  - low level, effect of, 3, 71–72
  - zinc consumption and, 72
- Cortisol
  - blood sugar and, 43, 57
  - osteoporosis and, 36
  - stress and, 23, 53
- C-reactive protein (CRP), 69
- Dementia
  - analytes evaluating for, 54–55*t*
  - biochemical aspects of, 52–55
  - causes of, 51–52*t*
  - symptoms of, 50
- Depression
  - celiac disease and, 22
  - fatigue and 41–45
  - food addiction and, 34
  - low dopamine and, 24
  - low thyroid function and, 13
  - osteoporosis and, 37
  - overweight and, 56–57
  - sleep deprivation and, 64

- Diabetes
- diet and 16
  - mitochondria and, 27–28
  - overweight and, 56–57
  - sexual dysfunction and, 60
- Diet
- blood sugar level and, 61–62
  - cancer and, 67–68
  - Mediterranean Dietary Pattern, 16
  - and nutrients, 16–19
  - osteoporosis and, 40
  - prostate cancer and, 68
  - Standard American Diet (SAD), 16, 18
  - weight problems and, 58
- Dietary supplements, 3, 7–9, 30, 54, 69, 72
- Digestion, 19–23, 39
- DNA, 8, 13, 25, 27, 54, 67, 69
- Dopamine, 9, 24, 33–35, 42, 62, 72–74
- Drugs
- addiction to, 33–34
  - caffeine as, 43
  - dementia and, 50
  - and mitochondrial damage, 30–32
- Dual-energy X-ray absorptiometry (DEXA), 38–39
- Enzyme
- digestion and, 19
  - methylene tetrahydrofolate reductase (MTHFR), 25
  - requirement for nutrients, 24–25
- Epinephrine, 4, 13, 37
- blood sugar and, 43
  - food addiction and, 34
  - pathway for production of, 3*f*
  - stress and, 23
- Essential amino acids, xii, 35, 41, 49, 61
- Estrogen, 36–37, 69
- Exercise
- biochemical dysfunctions in, 48–49*t*
  - moderate versus extreme, 47
  - muscle strength and, 48
  - nutrient depletions and, 48
- Extreme sports, effect of, 47–48
- Fatigue and depression
- analytes for evaluation of, 44–46
  - biochemical pathways and, 42*f*
  - causes of, 41
  - conventional medicine for, 41
  - nutrient deficiency and, 42*f*
  - stimulants and, 42–44
- Fats, 16–17, 19, 30, 47, 57
- Fatty acids, 74, 91
- omega-3, 17, 45
  - omega-6, 17
  - saturated and unsaturated, 16

- Flavonoid, 13–15
- Food intolerances, 19, 77
  - IgG test, 22
  - stress and, 23
- Free-radical damage, 8, 13, 30, 47, 53–54
- Frozen versus fresh foods, 18
  
- Gastroesophageal reflux disorder (GERD), 21
- Genetics, 24–26, 67
- Gas and bloating, 21–22, 77–79
  
- Homocysteine, 25, 39, 53–54, 60
- Hypoglycemia, 43, 52, 61–62
  
- Immune system, xii, 12–13, 21–23
- Insomnia
  - causes of, 64–65
  - consequences of, 64
  - treatment of, 65–66
- Intestinal bacterial infection, 8, 77
  
- Liver-detoxification pathways, 8, 69
  
- Magnesium, 3, 18–19, 37, 41, 45, 59
  - deficiency in, 12
- Medication
  - acid-blocking medications, 20–21, 39
  - for depression, 41
  - for erectile dysfunction, 60
  - mitochondrial damage and, 30–32
  - osteoporosis and, 39
  - for seizure, 61–63
  - side effects and, 2, 8
  - stomach acid and, 20
- Mediterranean Dietary Pattern, 16
- Memory loss
  - analytes evaluating for, 54–55*t*
  - biochemical aspects of, 52–55
  - causes of, 51–52*t*
  - choline, sources of, 52–53*t*
  - chronic stress and, 53
  - preventing, 55
- Methylene tetrahydrofolate reductase (MTHFR), 25
- Minerals, 2, 9–10, 41–43, 52, 72, 76–77
  - bone health and, 37–38
  - for energy production, 30*t*
  - examples of, 12
  - function of, 12–13
  - muscle strength and, 48
  - in processed foods, 18, 57
  - sexual desire and, 59
- Mitochondria, xiv, 27–32, 53–55
- Mitochondrial damage, 27
  - diseases associated with, 28*t*
  - drugs causing, 31–32
  - exercise and, 47
  - by medication, 30

- Mitochondrial dysfunction, 27–28, 30
- Montana Integrative Medicine, 1, 5, 71, 74
- Muscle strength and exercise, 4-487
- Naturopathic, xii, 2, 5, 93
- NBI Testing and Consulting Corporation, 5, 71
- Non-vitamin nutrients, 13
- Nosology, 80–92
- Nutrient depletions, 44, 48, 57
- Nutritional biochemistry evaluation*  
*for Age-Related Degeneration (ARD), 77–78f*  
*for asthma, 71–72f*  
*case studies, 71–79*  
*for seizures, 73–74*  
*for total body breakdown, 74–76f*
- Nutritional Biochemistry, Inc., (NBI), 5, 71
- Nutritional deficiencies, 18, 20, 59, 62, 66
- Nutritional medicine, xiii, 5, 25, 35, 40, 61*  
*for Age-Related Degeneration (ARD), 79*  
*for asthma, 71–72f*  
*for seizures, 74*  
*for total body breakdown, 76*
- Obesity  
 causes of, 57
- consequences of, 56
- measuring, 56
- preventing, 58
- Omega-3 fatty acids, 16
- Omega-6 fatty acids, 16
- Osteoporosis  
 causes of, 36–37  
 effects of, 38*t*  
 tests for, 38*t*  
 types of, 36
- Overweight  
 consequences of, 56  
 definition of, 56
- Parasympathetic nervous system, 23, 60
- Parkinson's disease, 28, 51, 74  
 symptoms of, 24
- Pharmaceutical industry, xii, 30
- Phenylalanine, 2, 9–10, 41, 42, 44, 62, 74
- Processed foods, 16–18, 57, 67
- Prostate cancer  
 diet and, 68  
 sexual promiscuity and, 69  
 testosterone level and, 68
- Protein, 13, 22, 25, 27, 30, 57, 60,  
 amino acids, 9–10  
 blood sugar and, 62, 65  
 energy production and, 47  
 insomnia and, 65

- osteoporosis and, 37–38
  - sources of, 17
- Seizures
- biochemical evaluation for, 62–63
  - causes of, 61–62
  - effect of medications, 61
  - treatment strategy for, 61–62
- Selenium, 13, 19, 30
- Sexual dysfunction
- causes of, 59
  - effect of medications, 60
  - preventing, 60
- Sexual satisfaction
- arousal, 59–60
  - parameters for, 59
- Single nucleotide polymorphisms* (SNPs), 24
- Sleep apnea
- consequences of, 64
  - treatment options for, 64
- Standard American Diet (SAD), 16
- Stomach acid, 20
- decreased production of, 21
  - stress and, 23
- Stress, 20, 22, 25, 57, 64–65, 76
- bone health and, 37
  - chronic stress, 23, 37, 53,
  - extreme sports and, 48
  - and memory loss, 53
  - reduction techniques for, 65
  - seizure activity and, 62
  - sleep deprivation, 64
- Sympathetic nervous system, 23
- Thyroid hormone, 9, 13
- Tyrosine, 3, 9–10, 45, 72, 74
- Total-Body Breakdown (TBB), 74
- Vitamins
- for energy production, 30*t*
  - fat-soluble, 11, 17
  - memory loss and, 54
  - muscle strength and, 48
  - in processed foods, 18, 57
  - requirement of, 11–12
  - risk of death and, 7
  - sexual desire and, 59
  - water-soluble, 11, 17, 43, 48
- Volkow, Nora, 33
- Williams, Roger J., 11, 24
- Zinc, 3, 19, 30
- bone health and, 37, 39
  - effect of, 71–72
  - exercise stamina and, 49
  - thyroid function and, 13
